

Bail-in Tracker - BAT

Initiative: Wissenschaft und Datenjournalismus

Bewilligung: 20.10.2015

Laufzeit: 9 Monate

Projekt-Website: <http://www.bail-in-tracker.eu/home/>

The aim of the project is to create a tool that will provide extensive information on the debt portfolio of European banks and the level of bail-in-able debt where bank creditors bear the burden in case of financial distress. The project team consists of academic researchers from the Research Center SAFE at Goethe University Frankfurt and journalists from the German newspaper Börsen-Zeitung. The so-called "Bail-in Tracker" is of high interest to financial industry watchers such as journalists, researchers, supervisors and regulators as well as the interested public.
