

Junior Fellowship for Dr. Sidzabda Djibril Dayamba: Restoration and reclamation of mined-out areas and other degraded lands for biodiversity conservation and rural development in Burkina Faso: a chance for local people?

Initiative: Wissen für morgen – Kooperative Forschungsvorhaben im subsaharischen Afrika (beendet)

Ausschreibung: Postdoctoral Fellowships on Livelihood Management, Reforms and Processes of Structural Change

Bewilligung: 15.07.2013

Laufzeit: 3 Jahre

Mining in Africa offers opportunities for socio-economic development. However, its corollary post-mining land degradation constitutes a serious threat to local livelihood and ecosystems through alteration of vegetation and soil productivity, conflicts for the remaining land and pressure on the existing social and economic networks. The situation is particularly relevant for Burkina Faso where gold mining is rapidly developing, causing biophysical and socio-economic challenges. Leading post-mining areas back into production for local well-being is a difficult and complex task from a technical, institutional and social point of view. The proposed project intends to identify locally viable restoration options contributing to local livelihood and the ecological stabilization of degraded landscapes, and to define possibilities to promote them as a basis for sustainable development. The research will be implemented in four consecutive steps each one building on the former one: (1) Consequences of mining on woodlands ecosystems, local livelihood and the socio-economic networks, (2) Natural and societal potentials for restoring degraded sites and stabilizing local production systems, (3) Investigating economic and institutional context conditions for the stimulation of local potentials for action, (4) Investigating possibilities/ strategies for restoration/reclamation of degraded sites. The project will generate knowledge and restoration strategies for the benefit of local farmers, mining companies and will participate to capacity building of the post-docs, the local students and local technicians and farmers.

Projektbeteilige

Prof. Dr. Eva Schlecht

Universität Göttingen

Fakultät für Agrarwissenschaften

Department für Nutztierwissenschaften

Abteilung Tierhaltung in den Tropen und Subtropen

Göttingen

Prof. Dr. Nikolaus Schareika

Universität Göttingen
Sozialwissenschaftliche Fakultät
Institut für Ethnologie
Göttingen

Dr. Sidzabda Djibril Dayamba
