

Strengthening a reliable evidence base for monitoring the COVID-19 and other disasters

Initiative: Corona Crisis and Beyond – Perspectives for Science, Scholarship and Society (beendet)

Bewilligung: 09.12.2020

Laufzeit: 1 Jahre 6 Monate

The COVID-19 pandemic revealed notable shortcomings of existing data collection systems suffering from a lack of internationally comparable procedures and definitions. The project relies on a transparent approach allowing to provide internationally comparable evidence based on weekly excess deaths and mortality rates. The main practical outcome of the project is a comprehensive and freely accessible international database ensuring timely and reliable monitoring of the pandemic and other potential health threats in the future.
