European Common Defense and Shared Security in Times of COVID-19 (additional Corona-related funding)

Initiative: Herausforderungen für Europa

Bewilligung: 27.01.2021

Laufzeit: 1 Jahre 6 Monate

The Corona-module analyzes the implications of COVID-19 for European common defense and security policy. Data collection efforts will examine how the pandemic affects both mass public and elite opinion about this important policy area. The team plans to add two additional forms of survey data to the already planned data collection of the main project. With these surveys they want to have an accurate referent of public opinion concerning the changed attitude of political elites and the public masses toward a common European defense strategy and closer European integration.
