

Patterns in between Intelligences

Initiative: Künstliche Intelligenz – Ihre Auswirkungen auf die Gesellschaft von morgen

Ausschreibung: Künstliche Intelligenz - Link Masters

Bewilligung: 17.10.2021

Laufzeit: 1 Jahre 4 Monate

In Patterns in between intelligences an interdisciplinary group of artists from live coding, e-Textil design and dance comes together to build a new form of intelligence within public performative rituals that raises questions about the dominant thinking of AI. By weaving together improvised codes of sound, dance, textile and language, a shared, sensory intelligence emerges between the interplay of bodies, sound and costume sensors and starts to grow. In the search for a different artificial spirit, the project critically engages in the spiritual implications of AI and explores the potential of a collaborative approach to intelligence as oscillation. Can AI be used to transcend itself?
